Vesna Manojlovic Internet Governance & Environmental (un)Sustainability

We are in an environmental emergency! As a part of Internet Governance community, technical communities must focus on immediate actions of decreasing material & energy consumption, reducing GHG emissions and decelerating growth. Let's build the Internet within planetary boundaries. Vesna Manojlovic is a hacker, mother, activist, feminist and community builder at RIPE NCC, a regional internet registry.

Internet governance timeline

“Data is the New Oil”

THE INTERNET USES A HUGE AMOUNT OF ENERGY. THIS IS DUE TO TWO KEY FACTORS:

MANUFACTURING AND SHIPPING

Technology companies must manufacture and ship the internet's hardware including:

COMPUTERS

SMARTPHONES

SERVERS

POWERING AND COOLING

Computers and smartphones must be powered and cooled, drawing electricity from local grids.

This power is generated in different ways with varying emissions!

Global Internet usage growth

The number of people using the Internet globally has doubled in less than a decade. Global internet usage growth from 1995 to 2022

(Source: [Internet World Stats](https://www.internetworldstats.com))

2. The average growth rate of internet users is 8.2% per year.

The 100 largest companies in the world by market capitalization in 2022 (in billion U.S. dollars)

Source: <https://www.statista.com/statistics/263264/top-companies-in-the-world-by-market-capitalization/>

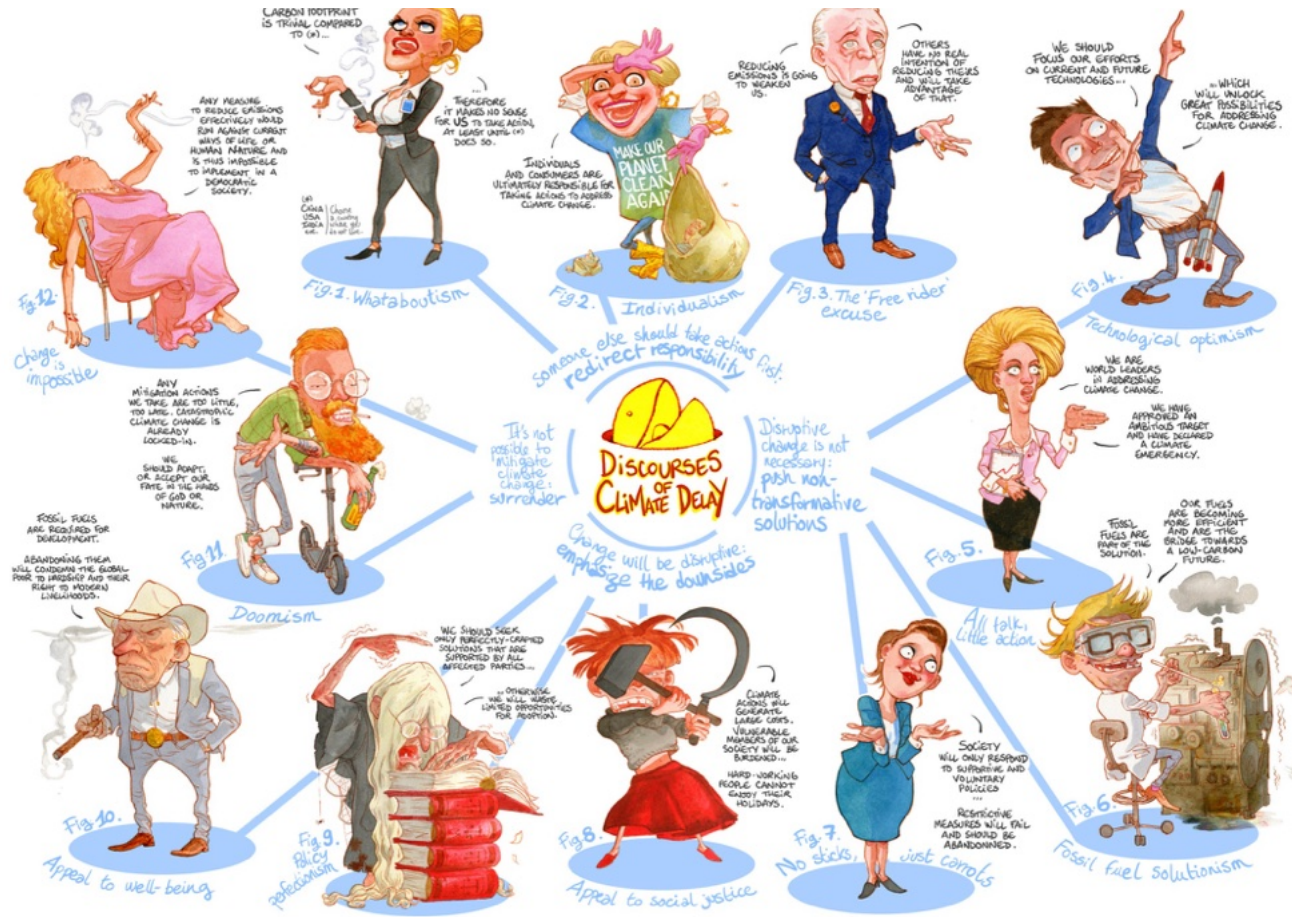

Global trends in digital and energy indicators, 2015-2021

	2015	2021	Change
Internet users	3 billion	4.9 billion	+60%
Internet traffic	0.6 ZB	3.4 ZB	+440%
Data centre workloads	180 million	650 million	+260%
Data centre energy use (excluding crypto)	200 TWh	220-320 TWh	+10-60%
Crypto mining energy use	4 TWh	100-140 TWh	+2 300-3 300%
Data transmission network energy use	220 TWh	260-340 TWh	+20-60%

- **Act** in solidarity with marginalised groups, frontline populations, endangered ecosystems

Problems Statements: ICT's Death Cycle

- 1. Materials are extracted in violent & polluting ways**
- 2. Shipping (of materials & equipment) is using fossil fuels**
- 3. Equipment is produced by using fossil fuel energy (& exploitative conditions)**

EXTINCTION IS FOREVER.

Extinction is forever. - Laura Uselis

- 4. Operating networks & data storage uses electricity sourced by burning fossil fuels**
- 5. Disposing old equipment is wasteful & polluting & unjust**
- 9. Flying to conferences is a terrible luxury**

Minimal Solutions: the Opposite of Death-cycle!

1. Re-Use existing materials

1. or re-source materials in sustainable & just ways

2. Use renewable energy sources

1. (refuse fossil fuels)

3. Produce locally (reduce shipping)

4. Decrease energy usage

-7.6%
/year

5. Reduce new equipment needs: Repair; Repurpose; Recycle

6. Do Not Fly! (take a train / bike, or use email / chat)

“Why Haven't We Bent the Global Emissions Curve?”

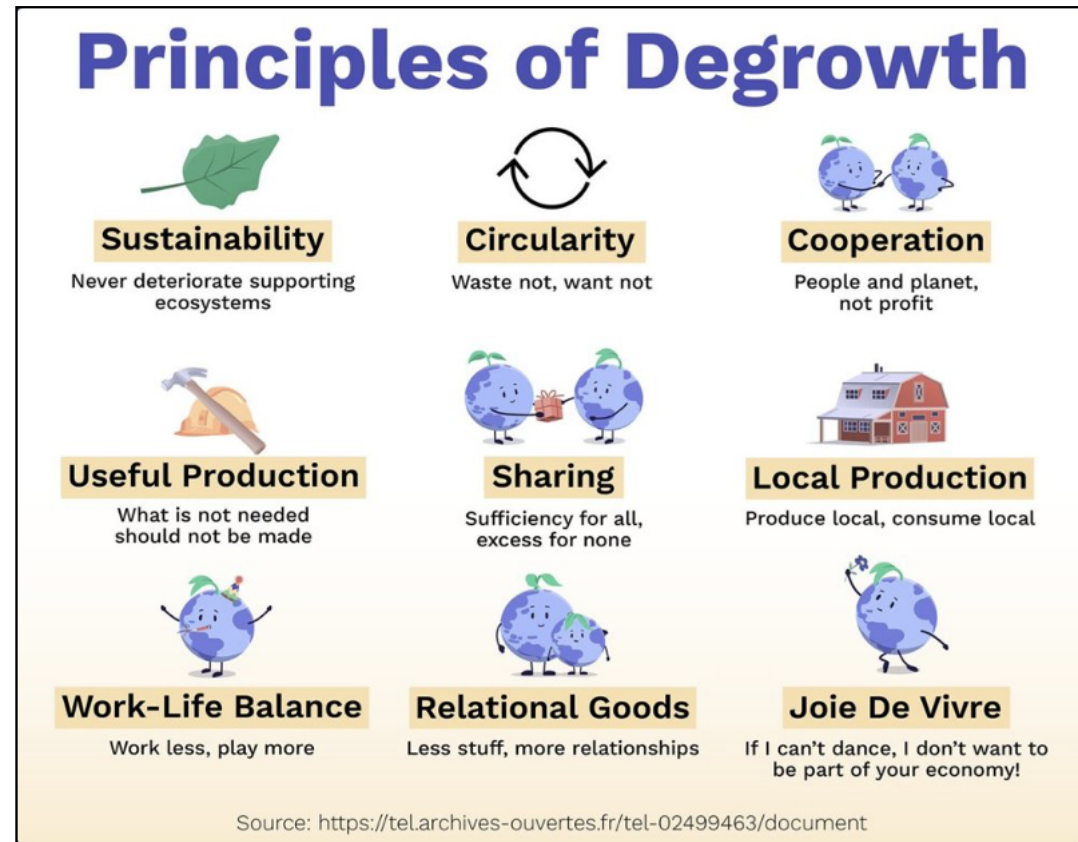

● (... “In Three Decades of Climate Mitigation”)

- “Annual Review of Environment and Resources” (October 2021) <https://www.annualreviews.org/doi/full/10.1146/annurev-environ-012220-011104>
- “...the centralization of power and the privileges that accompany [it] have coalesced around a particular worldview”
- “inequities in economic and political power have allowed those who benefit from the status quo to protect their interests”
- => Rapid & Radical Changes, or Chaos & Collapse
- **Biases: “tech is neutral” / “we are the good guys” bias / techno-optimism**
 - efficiency myth (Jevons paradox)
 - aligned with dominant power structures
 - focused on growth

the scale and rapidity of change now required of human societies, can no longer be reconciled with a massaged form of the status quo. In a real sense, a critical tipping point has emerged. Whatever direction is chosen, the future will be a radical departure from the present. Societies may decide to instigate rapid and radical changes in their emissions at rates and in ways incompatible with the Zeitgeist, or climate change will impose sufficiently chaotic impacts that are also beyond the stability of the Zeitgeist. Within both of these futures, the existing power structures and paradigm associated with the Davos cluster are simply unfit for purpose.

Figure 1: Global income deciles and associated lifestyle consumption emissions

Source: Oxfam

Decolonizing Internet, Economy, Ecology...

Kate Raworth

VANDANA SHIVA

"I think the combination of feminism and ecology creates two potentials. First, I have seen feminism that is not ecological become a new oppressor. I have seen environmentalism that is not feminist enough also become a new elitism. Ecofeminism prevents those two new forms of elitism by saying, No, it's about society and nature. It's about other ways of thinking"

Nonhlanhla Makuyana

IETF Recommendations*

- For the corporations & communities:
 - **reduce by 7.6% / year on all metrics** (emissions, materials, water, energy...)
- **Create NZE-WG**
 - **“Net Zero Emissions” Working Group**
- **Add “Sustainability Considerations” section to every ietf-draft, RFC, BCP**

* *personal opinion*

What should we not do?

- Use systems that are energy inefficient
 - Proof of work, old hardware, inefficient algorithms and protocols (computation a
- Use bad energy sources
 - Fossil fuels
 - Energy sources that are not green, renewable, clean....
 - Large greenhouse gas emissions and air pollution
- Luxury consumerism
- Systems that produce a lot of non-recyclable e-waste
- Systems with wasteful over-consumption of water, land, minerals
- Digital colonialism
 - Use of resources, export of e-waste for “recycling”
- Predatory systems that have a negative impact on society
 - Crypto-assets
- Use nonsense numbers that do not add up
- Send too many ACKs.
- Fly, use ICT systems instead

EU / Green Digital / ICT

Political Demands for Digitalisation & DeGrowth

Three requirements must be met for digitalisation to work for sustainability:

- The social and environmental impacts of producing and operating **digital devices, infrastructures and data centres** must be reduced. To make a difference in the short term, this report presents a combined strategy for digital sufficiency, repairability, circularity, and efficiency.
- The growth-oriented **business models of Big Tech companies** must be controlled and eventually replaced by business models that are oriented towards the common good. This report points out three policy pathways that can initiate this transition.
- The governance of **data and artificial intelligence** needs to actively pursue an information-based circular economy. This report shows which new institutions are required, and which policies can put data and AI in the service of sustainability.

Political Demands, Bits & Bäume 2022

1. Digitisation within the planetary boundaries
2. Global justice and regional self-determination
3. Redistribution of technological design power, democracy and participation
4. Fair digitisation, sustainable technology design and social issues
5. Protection of digital infrastructure and IT security

Inspiring Examples

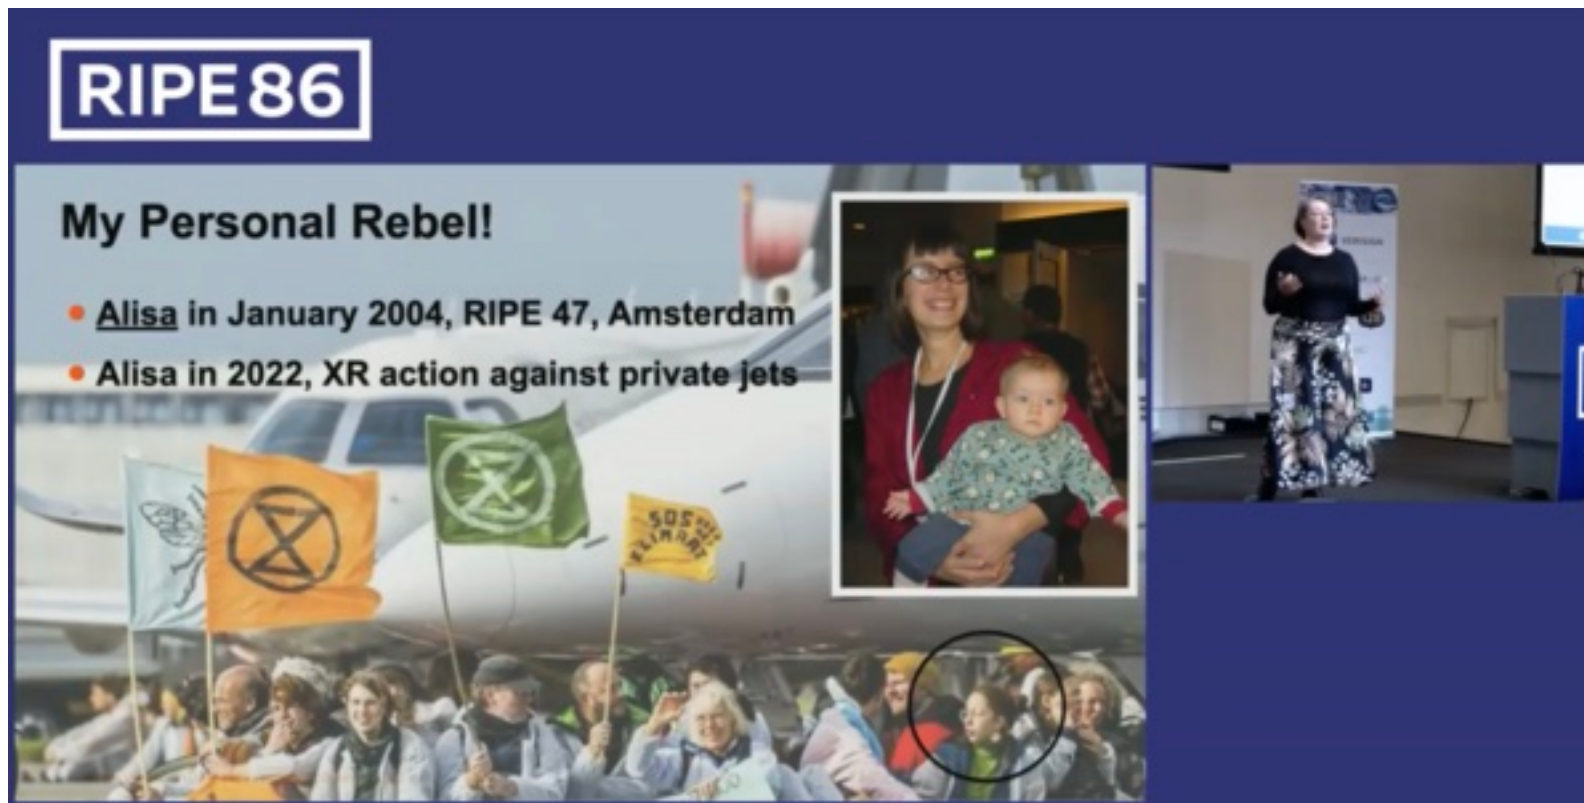

- Reduce, Repair, Repurpose, Recycle (equipment)
- Community Networks, Mesh, Low-power networking, disaster-recovery net
- Decolonising the Internet, Feminist Internet, Solar Internet
- Low-tech, Slow tech, Retro-tech, Green Tech, Appropriate Technology
- Counter Computings: Frugal-, Convivial-, Benign-, Permacomputing
 - [https://wiki.techinc.nl/Sustainability#Alternative Computings](https://wiki.techinc.nl/Sustainability#Alternative_Computings)
- Self-hosting, federation, decentralised networks

SolarPunk, Climate-Fiction

- - Fifth Sacred Thing, Starhawk
- - Speaker for the Dead, Orson Scott Card
- - The Dispossessed, Ursula K. Le Quinn
- - WalkAway, Cory Doctorow
- - Beyond Civilisation (series), Daniel Quinn
- - Diamond Age, Neal Stephenson
- - Parable of the Sower, Octavia Butler
- - Donna Haraway
- - HumanKind: Timothy Morton
- - Tim Fox

Urgency, Degrowth, Rebellion

- “Environmental Impact of the Internet” at RIPE86, Rotterdam, May 2023
